

The Irlen Method is non-invasive, drug-free technology, that uses colored overlays and spectral filters, worn as glasses or contact lenses, to improve the brain's ability to process visual information & relieve visual stress, chronic migraines and headaches, and can help brain injuries and ADHD and anxiety

Over 25 years of
International Evidence-
Based Research

Over 300,000 children and adults wear Irlen Spectral Filters and over 1,000,000 use Irlen Overlays worldwide. Thousands of schools provide Irlen Screenings & Overlays for Irlen Syndrome "Scotopic sensitivity," affecting reading, handwriting, attention, self-regulation, math, and other learning & working problems Assistive Technology & Learning Accommodation for 504 plans, standardized testing, IEPs.

This could be one of the most useful classes you have taken to give real help to students and clients.

**Susan Hughes MA will be teaching
5 on-line Irlen Screener Certification
Classes in 2023 April 21/22/23,
June 5/6/7, July 28/29/30, Sept 22/23/24
December 1/2/3**

**Learn How Sensory Stress Affects
Learning, Attention and Behavior**

Visual Stress is a major cause of learning and health problems such as headaches/migraines, seasonal affective disorder, ADD/ADHD, anxiety, perceptual dyslexia, poor depth perception, sensory processing disorders, anxiety, traumatic brain injury, and light sensitivity. Over 80% of learning is visual and 1 in 5 of students in schools and colleges have visual perceptual problems serious enough to affect learning. This also affects many adults, causing headaches, depression, light sensitivity and even difficulty with job advancement.
